github.com/trtrungnghia2001 • trungnghia-portfolio.vercel.app

Full-stack Engineer specializing in high-performance, real-time web applications using Next.js, Node.js, and PostgreSQL. Experienced in designing scalable architectures, optimizing frontend performance, and building real-time systems with WebSockets. Demonstrated a strong focus on optimizing system efficiency, enhancing developer experience, and prioritizing user-centric design.

SKILLS

Frontend: HTML, CSS, JavaScript, ReactJS, Next.js, Tailwind CSS, Shadcn UI, Ant Design, Redux Toolkit, Zustand, Clerk

Database: MongoDB, MySQL, PostgreSQL, Firebase

Programming Languages: JavaScript, TypeScript, Java

Dev Tools: Git, GitHub, Postman, VS Code, Visual Studio, Vercel, Render

Backend: Node.js, Express, RESTful APIs, JWT, Passport.js, OAuth2, Redis, Socket.IO, Prisma

PROJECTS

Komorebi

Sep 2026 - Sep 2026

A robust and high-performance Admin Dashboard built with the MERN stack, designed for secure data management, real-time tracking, and system configuration.

Features:

- Next.js App Router Architecture: Engineered a high-performance web platform using Next.js (App Router), TypeScript, Tailwind CSS, and shadcn/ui; optimized dynamic parameters and layout structures, reducing initial page load time to <800ms.
- AI Tech Lead Simulator: Integrated LLMs with custom prompt engineering to simulate real-time Tech Lead interviews based on candidate CVs and Job Descriptions (JDs), generating instant feedback and scoring metrics across 10+ core competencies.
- Comprehensive Practice Suite : Built interactive training modules combining targeted technical interview questions and hands-on coding exercises, boosting preparation efficiency by ~40% through structured learning paths.
- Immersive Focus Workspace: Designed an all-in-one productivity hub featuring Task Management, quick Notes, real-time analytics charts, customizable ambient soundscapes, and dynamic background effects to sustain Deep Work.
- Configured Supabase (PostgreSQL) for seamless authentication, real-time data synchronization, and persistent storage of user practice logs and task metrics with sub-50ms.

Tech Stack:

Next.js (App Router), TypeScript, Tailwind CSS, Zustand, Supabase, Groq AI

Demo: <https://komorebi-two.vercel.app>

Social Media Platform

Apr 2026 - May 2026

This social media platform enables users to build connections, share content, and participate in interactive discussions. The application includes features such as user profiles, post creation, commenting, and post engagement (e.g., likes).

Features:

- Real-time Interaction & Presence: Engineered a high-concurrency chat system using Socket.io, handling 100+ concurrent connections; implemented bi-directional communication with real-time presence tracking and instant read receipts.
- Performance Optimization: Achieved near-zero perceived latency using Optimistic Updates and reduced redundant API overhead by 60% through advanced TanStack Query caching and pre-fetching strategies.
- Scalable Data Handling: Implemented Infinite Scrolling and Debounced Global Search, cutting server load by 70% and ensuring smooth 60fps UI transitions during high-frequency interactions.
- Backend & DB Excellence: Leveraged Prisma relational queries with optimized include/select patterns to minimize database round-trips, ensuring consistent sub-second response times for social graph data.

Tech Stack:

Next.js 15 (App Router), TanStack Query, Context API, Socket.io, WebRTC , Node.js, Prisma ORM, PostgreSQL, Clerk Auth

Demo: <https://social-media-platform-xmlk.onrender.com/>

Cimanga Hub

Mar 2026 - Mar 2026

A high-performance social platform for Movie and Manga enthusiasts. Built with a modern tech stack to ensure seamless real-time engagement, secure authentication, and a sleek user experience.

Features:

- Flexible Logic Architecture: Engineered a Universal Commenting System using a single-table logic with polymorphic identifiers, reducing redundant code by 40% while handling both Movie and Manga data types.
- Smart UX & Session Management: Developed a seamless OAuth2 flow with Google that automatically redirects users to their previous page post-login, and managed global state with Zustand to deliver zero-lag session transitions.
- High-Performance UI/UX: Built a mobile-first, dark-themed interface with Tailwind CSS, achieving 98/100 Lighthouse performance scores through optimized infinite scrolling and asset lazy-loading.
- Data Privacy & Integrity: Implemented strict ownership-based access control with Supabase Row Level Security (RLS), ensuring users can only manage their own viewing history and account data.

Tech Stack:

React 19 (Vite), TypeScript, Tailwind CSS, Zustand, Supabase (Base)
GitHub: <https://github.com/trtrungnghia2001/single-app-site/tree/main/vite-react-ts-cimanga-hub>
Demo: <https://vite-react-ts-cimanga-hub.onrender.com>

WORK EXPERIENCE

Intern and Fresher Frontend	Nov 2023 - Jan 2024
Azu Tech	Hà Nội
- Enhanced mobile user experience by developing a mobile-responsive design, resulting in a 12% increase in mobile conversion rates. - Designed and developed a reusable React component library, reducing development time for subsequent projects by an average of 30%. - Collaborated with the backend team to optimize API calls, leading to a 20% improvement in server response time and enhanced overall application performance.	

EDUCATION

Information Technology Engineer	Aug 2019 - Jun 2024
Hanoi University of Business and Technology (HUBT)	GPA: 3.5

LANGUAGES

English (Elementary proficiency)
